

# Qwiet AI Solution Brief

Proactive, AI-Driven Security for Faster, Safer Code

Qwiet AI redefines application security with AI-driven autonomous security agents that identify, prioritize, and remediate vulnerabilities in real-time. Unlike traditional security tools, Qwiet AI's Agentic AI framework functions as a collaborative team of AI-powered security experts, ensuring software security without disrupting development.

## Benefits

### Faster Remediation & Increased Efficiency via AI-Driven Fixes

Qwiet AI's Agentic AI AutoFix proactively detects and fixes vulnerabilities before deployment, significantly reducing security risks and minimizing last-minute patches. By leveraging AI, remediation time is reduced by up to 95%, allowing developers to resolve security issues in minutes while maintaining efficiency.

### Privacy-First Approach

Qwiet AI keeps source code private by preventing sharing with external AI models. Its tenant-specific LLMs ensure complete data security and compliance. This privacy-first approach instills a sense of security, ensuring the protection of your source code.

### Cost Savings & Compliance Assurance

Qwiet AI reduces the financial burden of late-stage vulnerability fixes while ensuring alignment with security frameworks like OWASP, NIST, and GDPR.

## Product Features

### Agentic AI AutoFix

A multi-agent system that autonomously detects, verifies, and remediates vulnerabilities. Each agent specializes in a distinct security function, including scanning for potential threats, simulating attacks to identify weak points, validating the effectiveness of fixes, and auditing dependencies to ensure comprehensive security.

### Advanced Threat Detection with CPG

Our system analyzes data flows and identifies absolute attack paths, significantly reducing the occurrence of false positives by 90% compared to competitors. This means your team can focus on real threats, enhancing overall security.

### Intelligent Prioritization

Our system automatically ranks vulnerabilities based on their reachability, exploitability, business impact, and threat intelligence. This ensures that your team can first address the most critical risks, enhancing overall security and efficiency.

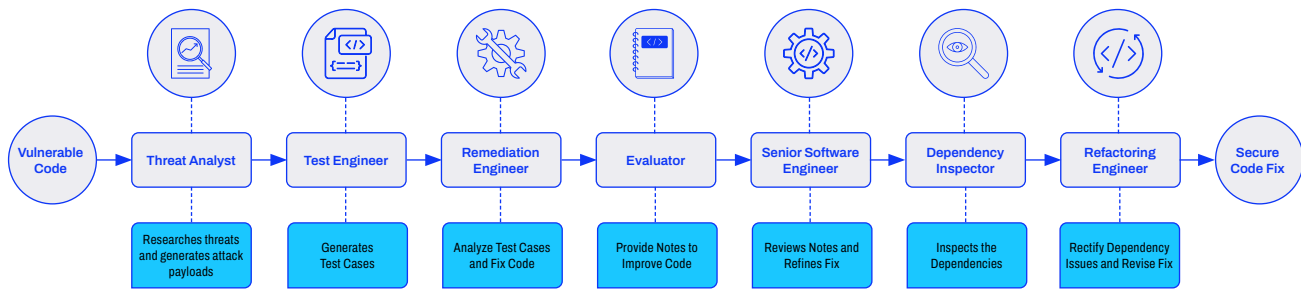

### PreZero AI Platform

Qwiet AI offers comprehensive security, covering custom code, open source dependencies, IaC configurations, and secrets in a single platform. This unified approach ensures complete protection across your entire application stack.

### CI/CD Pipeline Integration

Integrates security into CI/CD pipelines and IDEs, embedding security into developer workflows without disrupting productivity. Qwiet AI meets developers where they work, reducing friction and accelerating secure development.

## Guided Agentic Workflow

## Use Cases

### AI-Powered CI/CD Security

Runs continuous security checks at every commit and pull request, preventing vulnerabilities from reaching production.

### Automated Code Remediation

Uses agent-based AI workflows to identify and fix security flaws, reducing developer workload while improving security.

### Open Source Risk Management

Analyzes dependencies and prioritizes vulnerabilities based on actual exploitability rather than CVE scores alone.

### Enterprise DevSecOps Adoption

Bridges the gap between security and development teams, eliminating bottlenecks and accelerating secure software delivery.

## Customer Testimonials

“We can scan our apps more often with the platform because it’s fast enough to fit into our SDLC process.”

– Retail Industry Developer

“The AI AutoFix feature saved our team hours of manual code review. The accuracy and prioritization are game-changing.”

– SaaS Security Engineer

Ready to eliminate security risks before they become problems?

Scan the QR code to contact Qwiet AI today to schedule a demo or request a free trial of Auto-Fix. Let Qwiet AI autonomously detect, prioritize, and remediate security flaws so your developers can focus on building instead of being security experts.
